

Glyphosate plus Hammer

Rates quoted in HerbiGuide are for the total amount of herbicide applied in a ratio of 20 parts of glyphosate 450g/L to 1 part of Hammer.

For example:

A rate of 525 mL/ha I made up of 500 mL/ha of glyphosate plus 25 mL/ha Hammer.

A rate of 525 mL/ha I made up of 500 mL/ha of glyphosate plus 25 mL/ha Hammer.

A rate of 1050 mL/ha I made up of 1000 mL/ha of glyphosate plus 50 mL/ha Hammer.

A rate of 1575 mL/ha I made up of 1500 mL/ha of glyphosate plus 75 mL/ha Hammer.

This mix provides control of a wide range of weeds including those that glyphosate is weak on such as Clovers and Mallows.

See the individual components for further information.
