

Lexone plus Simazine

See Lexone and Simazine for label information on individual components.

The rates quoted in HerbiGuide are for a 100:2000 mixture of Lexone DF plus Flowable Simazine 500.

For example a mix of 2100 mL would have 100 grams of Lexone DF and 2000 mL of Flowable Simazine 500. Similarly a mix of 2100 mL could be made from 100 grams of Lexone DF plus 1110 grams of Simazine 900 granules.

This mix may damage the crop but there are few other solutions for capeweed and Doublegee control in lupins.

Use only on lupins with high levels of triazine tolerance such as Merrit and Gungurru.
