

16th March 2002 – Kenso Agcare Ken-Up Aquatic 360 Herbicide draft label

Page 1 of 16

STORAGE AND DISPOSAL

Store in the closed, original container in a cool, well ventilated area. Do not store for prolonged periods in direct sunlight.

Triple or preferably pressure rinse containers before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point.

If not recycling, break, crush, or puncture and bury empty containers in a local authority landfill. If no landfill is available, bury the containers below 500mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers and product should not be burnt.

For refillable containers: Empty contents fully into application equipment. Close all valves and return to point of supply for refill or storage.

SAFETY DIRECTIONS

Product will irritate the eyes and skin. Avoid contact with eyes and skin. When preparing product for use, wear elbow-length PVC gloves and face shield or goggles. After use and before eating, drinking or smoking, wash hands, arms and face thoroughly with soap and water. After each day's use, wash contaminated clothing, gloves and face shield or goggles. When using controlled droplet applicator, wear protective waterproof clothing and impervious footwear.

FIRST AID

If poisoning occurs, contact a doctor or Poisons Information Centre (Phone 131126).

MATERIAL SAFETY DATA SHEET (MSDS)

Additional information is listed in the MSDS, which is available from the supplier.

Conditions of sale

Kenso Corporation (M) Sdn. Bhd. will not accept any responsibility whatsoever and howsoever arising and whether for consequential loss or otherwise in connection with the supply of these goods other than responsibility for the merchantable quality of the goods and such responsibilities mandatorily imposed by Statutes applicable to the sale or supply of these goods. To the extent allowed by such Statutes the liability of Kenso Corporation (M) Sdn. Bhd. is limited to the replacement of the goods or (at the option of Kenso Corporation (M) Sdn. Bhd.) the refund of the price paid and where possible sufficient part of the goods to enable proper examination being returned to Kenso Corporation (M) Sdn. Bhd. within thirty days of delivery.

DIRECTIONS FOR USE

RESTRAINTS

DO NOT spray Kenso Agcare Ken-Up Aquatic 360 Herbicide if rain is likely to occur within 6 hours. Heavy rainfall within 2 hours after application may wash the chemical off the foliage and a repeat treatment may be required

DO NOT add extra surfactant or mix with other agricultural chemicals, herbicide oils or any other materials unless specifically directed on the label.

For all States u	unless noted
SITUATION	CRITICAL COMMENTS
Agricultural areas	Kenso Agcare Ken-Up Aquatic 360 Herbicide may be used for the control of annual and perennial weeds as directed, in agricultural land prior to the sowing of any edible or non-edible crop, but NOT prior to transplanting seedling tomatoes.
Forests	Kenso Agcare Ken-Up Aquatic 360 Herbicide can be used to control weeds prior to establishing nurseries, site preparation prior to planting and amongst established trees using directed spray or shielded spray or wiper equipment. Do not allow wiper surface to contact any part or the tree. Avoid spray or spray drift contacting leaves or green bark on trees as severe injury may occur.
General weed control in Domestic areas (home	For the control of many grasses and broadleaf weeds RATE: 10mL PER LITRE OF WATER
garden) Commercial,	Apply when weeds are actively growing. Apply to ensure complete brown
Industrial and Public Service Areas, agricultural	and uniform wetting of foliage. Visible symptoms may take from 3-7 days to develop.
buildings and other farm situations. For specific weeds,	
brush and woody weeds or unwanted trees refer to the appropriate tables	
on this label Horticultural	Kenso Agcare Ken-Up Aquatic 360 Herbicide can be applied as a directed
Vineyards Nuts (Including Almond, Pecan,	or shielded spray or using wiper equipment. DO NOT apply as a spray near trees or vines less than 3 years old unless they are shielded from spray and spray drift. DO NOT allow wiper to contact any part of the tree
Macadamia, Pistachio, Walnut) Citrus	or vine. For citrus, nuts, olive, Pome fruit and vineyards - Avoid spray or spray drift contacting buds, leaves, green stems, canes or laterals, suckers,
Stone Fruit Avocado, Banana, Blueberries, Custard Apples,	fresh wounds or fruits as severe injury may occur. Tea – apply a maximum of 4L/ha by shielded boom or directed off centre nozzle or 0.5L/100L by directed handgun or knapsack to avoid application to the crop.
Duboisia, Figs (dessert), Guava, Kiwifriut, Litchi.	ALL other crops: DO NOT allow spray or spray drift to contact any part of the plant including the trunk. NOTE: Extreme care is required where split bark on Kiwi fruit and green
Mango, Monstera (fruit), Olives, Paw	stems of paw paw are present. May be mixed with other herbicides to provide residual control of some
Paw, Persimmons, Pome fruit, Raspberries, Tea	annual weeds. See tank mixture/ compatibility for directions.
Onions Post-plant, pre-	For control of annual weeds and suppression of perennial weeds including rope twitch. Apply this product at 1-3L/ha post sowing and at least 7 days
emergence application (TAS ONLY)	before crop is due to emerge. DO NOT apply to emerging onion plants as severe injury will result. Use the lower rate on small, actively growing annual weeds. Increase to the higher rate for larger annual weeds (over
Pasture	15cm tall) and for suppression of perennial weeds. DIRECTED (SPOT) APPLICATION: This product is non selective and may damage or kill any plant in the sprayed area. Re-treatment and/or
	pasture improvement may be necessary to restrict seedling re- establishment. SELECTIVE APPLICATION: See WIPER EQUIPMENT
	BOOM APPLICATION: This product may be used to suppress existing pasture species prior to re-seeding or establishment of other crops. Where spot application (spray or wiper) is undertaken, grazing stock need
	not be removed. CAUTION: Certain plants may be naturally toxic to stock. Where known toxic plants are present DO NOT allow stock to graze until complete
	brown out has occurred.

GENERAL USES For all States unless noted

Peanuts, Cotton, Soybeans, Sugar cane, Navy beans and chickpeas NSW, ACT, Qld only – using selective application equipment Sugar cane Ratoon Sprayout For the control of	Using Wiper equipment apply to weeds growing between crop rows or to weeds growing at least 15 cm above the crop. Do not allow wiper to contact the crop and do not allow solution to drip form the applicator or severe crop injury will result. Refer to Wiper application section of this label. Shielded Sprayers – (cotton only) apply this product to weeds growing between cotton rows. For rates of application refer to the Weeds Controlled tables. DO not apply to crops less than 20cm high. Do not allow spray or drift to contact any part of the cotton plant as severe injury may occur. Apply to actively growing ratoons 60 – 100cm tall when growing conditions are good. Do not apply if plants are under stress from waterlogging or low moisture.
sugar cane ratoon regrowth in NSW and Qld only	Rate: 4-9L/ha. Use the higher rate for control and the lower rate for suppression or where cultivation is to follow.
Cotton Pre-Harvest For the control of Bathurst Burr, Noogoora Burr, Winter annual weeds, including Sow Thistle and the seasonal suppression of Nutgrass NSW and Qld only	DO NOT APPLY TO CROPS INTENDED FOR SEED PRODUCTION Apply alone or in tank mixtures with Dropp or Harvade. Apply when at least 60% of bolls are open and immature bolls can be easily cut with a sharp knife. Where a leafy canopy limits spray coverage, reduced weed control can be expected. For best results under these conditions, delay application until the canopy re-opens following initial conditioning treatment. Where the control of Noogoora Burr or Nutgrass is required, treatments should be applied prior to the onset of frosts. When tank mixed with defoliants, a slightly higher proportion of cotton leaf may be retained, particularly where the higher rate is used. Read and follow all tank mix products label instructions. RATE: Apply 2.5L/ha for Nutgrass control and 1.25-2.5L/ha for the other weeds. Use the lower rate on light infestations of small weeds, when the crop canopy allows adequate spray coverage of the weeds. Increase to the higher rate when the crop canopy may limit spray coverage, when treating dense infestations, or when treating larger weeds.
Non-Agricultural Areas Around buildings Commercial Domestic Industrial and Public service areas Rights of way	For residual control of annual weeds Kenso Agcare Ken-Up Aquatic 360 Herbicide can be tank-mixed with simazine and other residual herbicides permitted for non agricultural use. Refer to "Tank—Mixtures" section.

PERENNIAL WEEDS - NON CULTIVATED SITUATIONS

	STATE	APPLICATION RATE			CRITICAL		
CONTROLLED	STATE				COMMENTS		
	_	Boom L/Ha	Handgun / Knapsac k Vol/1L	Low volume Product: water			
Bamboo (<i>Bambusa</i> spp.)	All States		10mL	-	Apply to actively growing foliage and/or regrowth which is between 1m and 2m tall. Cut stump: dilute to 1:6 ie mix 1 part Kenso Agcare Ken-Up Aquatic 360 Herbicide plus 6 parts water. Cut stems back to 20cm high, pour mixture down hollow stem or wet the cut.		
Bent grass	Vic, Tas only	2.5L	5mL	-	Apply to actively growing plants in late spring when they have some seed-head development, but before summer moisture stress. Follow-up management is required. Full disturbance with a tyned implement should follow 10-21 days after spraying. Then follow with a summer crop and/or re-seeded pasture or crop in the following autumn.		
Blady grass	Qld NSW, ACT only	9L	13mL	-	Apply to actively growing plants in the early head stage.		
Bitou bush/ Bone seed Chrysanthemoides monilifera	Qld NSW Vic, Tas, ACT only	-	5 or 10mL	1:29 or 1:19	Plants must be actively growing. Do not spray bushes under stress. Best results will be achieved during Winter when bushes are flowering. As no residual control is provided, further treatment of germinating weed seedlings may be necessary. Use the higher rate (1:19) on bushes over 1.5m high LOW VOLUME APPLICATION : (eg Splatter gun gas gun): Ensure spray contacts all foliage. Use the higher rate (1:19) on bushes over 1.5m high		
Blackberry Rubus fruticosus L. agg	All States	-	10-13 mL	-	Apply from January to May (flowering to leaf fall). Spray plants which are not under stress to thoroughly wet all foliage but not to cause excessive run off. Use the Higher Rate for dense, old stands over 2m high. Visible symptoms may not be fully apparent until next season. Burning (after complete brown out), pasture improvement and/or further treatment may be needed to control seedlings and regrowth. The use of CDA equipment is not recommended. TAS ONLY- Do not spray bushes bearing mature fruit.		
Boxthorn, African Lycium ferocissimum	All States	-	7-10 mL	-	Spray to wet all foliage but not to cause excessive run off. Use the Lower Rate for young bushes and the Higher Rate for bigger mature bushes. Burning (after complete brown out), pasture improvement and/or further treatment may be needed to control seedlings and regrowth. Do not spray during hot, dry summer periods. The use of CDA equipment is not recommended.		
Bracken Pteridium esculentum	All States	9L	15 mL	-	For boom application always add Pulse ¹ Surfactant (200mL per 100L spray). Wiper application is recommended (see Wiper equipment). Slash bracken in previous spring/summer. Apply in March-May to completely unfurled fronds, actively growing. Visible symptoms may not be visible until next season. Follow up application is recommended Preferably associated with Pasture improvement) to achieve complete control.		
Carpet Grass Axonopus spp.	All States	3L	5mL	-	Apply to actively growing plants when most have reached the early head stage.		
Cocksfoot Dactylis glomerata	All States	3L	7mL	-	For Couch in SA and WA apply in October - November.		
Couch Cynodon dactylon	All States	9L	13mL	-			

Crofton Weed	Qld, NSW, ACT only	-	5mL	-	Apply to plants with full foliage which are actively growing. Spray to wet all foliage but not to cause excessive run off. Seedling germination may have to be retreated.
Flatweed/ Cats Ear (<i>Hypochoeris</i> <i>radicata</i>)	All States	3L	7mL	-	Apply to fully developed rosettes at the early flower stage.
Gorse (Furze)	All States	-	10mL + Pulse ¹ 2 mL	-	Apply to actively growing plants. May be applied all year round. Always add Pulse. Spray to wet all foliage . Burning (after complete brownout) pasture improvement and/or further treatment are recommended to control seedlings and/or regrowth.
Groundsel Bush (<i>Baccharis</i> <i>halimifolia</i>)	Qld, NSW & ACT only	-	7mL- 10mL	1:9	Apply to actively growing plants using the higher rate for plants over 2m tall. Do not spray plants during summer drought stress conditions or during winter. Spray to wet all foliage. Further treatment and/or pasture improvement are recommended to control seedlings and/or regrowth. LOW VOLUME application: (eg Splatter gun and gas gun Use 1:9 mixture (10%) of this product : water. Apply 2 x 2mL doses per 0.5m bush height. Ensure spray contacts all foliage. Use of CDA equipment is not recommended.
Guinea Grass Panicum maximum	All States	9L	13mL	-	Apply to actively growing plants when most have reached the early head stage. For Wiper application see Wiper equipment.
Hawthorn (Crataegus spp.)	NSW, Vic, Tas, SA, WA, ACT only	-	10-13mL	1:9	Spray from flowering to leaf fall. Plants must be actively growing. Spray to thoroughly wet all foliage. Use the higher rate for plants over 2m tall. Burning (after complete brownout) pasture improvement and/or further treatment are recommended to control seedlings and/or regrowth. LOW VOLUME application: (eg Splatter gun and gas gun Use 1:9 mixture (10%) of this product : water. Apply 2 x 5mL doses per 0.5m bush height. Ensure spray contacts all foliage.
Hoary Cress (Cardia draba)	NSW, ACT Vic, Tas only	1.5L	5mL	-	Apply to actively growing plants which are not under stress . Best results are obtained if application is made late July-September at late rosette to flowering stage. Application may be integrated with long fallow. Cultivation may start 7 days after spraying. Wiper application may be used where sufficient stem elongation occurs (see Wiper Equipment). TAS: Add a non-ionic surfactant (50-60% ai) at 200-250mL/100L spray.
Johnson Grass Sorghum halepense Kangaroo Grass Themeda australis Kikuyu Grass Pennisetum clandestinum	All States	6L	10mL	-	Apply to actively growing plants when most have reached the early head stage. For wiper application on Johnson grass, off-type and volunteer sorghum, see Wiper Equipment.
Lantana (<i>Lantana</i> <i>camara</i>)	Qld, NSW, ACT & NT only	-	10mL	1:9	Apply to plants with full foliage which are actively growing. Spray to thoroughly wet all foliage . Do not spray when plants are drought stressed in the summer. Pasture improvement, burning (after complete brown out) and/or retreatment of seedling regrowth may be required. Addition of Pulse (200mL/100L) may improve control. LOW VOLUME application: (eg Splatter gun and gas gun Use 1:9 mixture (10%) of this product : water. Apply 2 x 2mL doses per 0.5m bush height. Ensure spray contacts all foliage. Sprinkler Sprayer: Apply 6mL of a 1:9 solution to every square metre of treated area. Use of CDA equipment is not recommended.
Ludwigia peruviana	All States	-	10mL	-	Apply when actively growing and at or beyond the early boom stage of growth., but before autumn colour changes occur. Thorough coverage is necessary for best control.

Love grass (Arrian) NSW, XCT BL 10mL - Apply to patch bit provement sections re-assignmented. MatTover (Expannium) Old. - SmL 119 Apply to patch with All foliage which are actively growing. Spray to thoroughly wet all foliage. Further treatment and/or patce improvement may be necessary to restrict seeding re- establishment. 						ธระสมแรกแกษาเ.

Sorrel (Rumex acetosella)	All States	6L	10mL	-	Apply to actively growing plants when the majority of plants are at the early bud stage.
Soursob (Oxalis pes-caprae)	NSW, ACT, Vic, Tas, WA, SA only	1.5L	5mL	-	Best results are achieved if plants are treated before senecence (plant yellowing) which occurs from late July to early September. Plants should be actively growing and not under stress. If foliage area has been reduced eg due to frosting or grazing allow regrowth to about 5cm before treatment.
St John's Wort (<i>Hypericum</i> <i>perforatum</i>)	All States	3L	5mL	-	Apply to actively growing plants at flowering to post flowering, procumbent stem stage (about Nov-May). To prevent seedling re-establishment, pasture improvement or re-treatment may be necessary.
Sweet Briar (<i>Rosa rubiginosa</i>)	NSW, ACT, Vic, SA, Tas, WA only	-	15 – 29mL	1:9	Apply from late flowering to leaf fall. Plants must be actively growing. Spray to thoroughly wet all foliage. Use the Lower Rate for bushes under 1.5m tall. Burning (after complete brown out), pasture improvement and/or further treatment are recommended to control seedlings and/or regrowth. LOW VOLUME APPLICATION (eg Splatter gun or gas gun): Apply 2 x 5mL dose per 0.5m bush height. Ensure spray contacts all foliage.
Thistle – Artichoke (Cynara cardunculus)	SA, Vic only	3L	5mL	-	Apply at the rosette to early head stage.
Thistle – Californian (Circium arvense)	Vic, Tas only	6L	10mL	-	Apply to actively growing plants at the flowering stage. To ensure maximum shoot emergence the area should not be cultivated prior to spraying. Re-treatment and/or pasture improvement may be necessary to restrict seedling re-establishment.
Yorkshire Fog Holcus lanatus	All States	3L	7mL	-	Apply to actively growing plants at the early head stage.

UNWANTED TREES

- FOR NSW, ACT, QLD, WA, TAS, VIC, NT ONLY

Restraints: DO NOT apply to trees under stress or to trees that are not actively growing.

Foliar application: High volume (Knapsack or handgun)	Eucalyptus species Willows	0-2.0m in height	1.0 – 1.3L per 100L When treating Eucalyptus species add Pulse at 200mL/100L	Ensure all foliage is wet. Use the higher rate for trees 1 to 2 m high.		
			at 200mL/100L spray mixture.			

AQUATIC WE	ED CON	ITROL						
Aquatic Areas For the control of emerged weeds in all fresh and brackish water which may be flowing, non-flowing or transient. Also for weeds on sides or banks of streams, lakes and in channels and drains. (See Weed Table Below)	ALL STATES	General II 1. Reduct submer being w 2. Do not stream or resel possible not ove weeds 3. When s sprayer 4. When 6	 DO NOT use additional surfactant/wetter, unless it is approved for use in aquatic situations. General Instructions 1. Reduction in effectiveness may result if more than ¼ of the above ground portion of the weed is submerged at treatment. Submerging the treated plants following treatment may result in the spray being washed from the plant surface, thus reducing effectiveness. 2. Do not apply this product within 0.5 km up-stream of a potable water intake in flowing water (i.e. river or stream etc.) or within 0.5 km of a potable water intake in a standing body of water such as a lake, pond or reservoir. Applications to moving bodies of water should be made while travelling upstream wherever possible to prevent concentration of this herbicide in water. When making any bankside applications, do not overspray more than 0.5m into open water. Avoid spraying across moving bodies of water, or where weeds do not exist. 3. When spraying floating weeds, use a low volume, low pressure boom sprayer, C.D.A., or sprinkler sprayer. Do not submerge the weeds when spraying as this may wash the herbicide off the leaves. 4. When emerged infestations require treatment of the total surface area of impounded water, treating the area in strips may avoid sudden impact on habitat. 					
Weeds Controlled	State	Boom L/ha	Rate Handgu n vol/100L	Knapsack mL/15L	Critical Comments			
Alligator weed	All States	-	1L	150mL	Apply when actively growing, from Summer through Winter. Floating form only.			
Brown beetle grass	NSW, ACT only	3L	5mL	-	Apply to actively growing plants. Do not apply to partially submerged plants.			
Cumbungi <i>(Typha</i> <i>spp.)</i>	All States	9L	1.3L	200mL	Apply to actively growing plants at the early head to full head stage (summer-autumn). Retreatment may be required to restrict seedling re-establishment. Wiper application is recommended (not Tasmania). See Wiper Equipment section.			
Glyceria	Tas only	6L	10mL	-	Apply to actively growing plants at the mature head stage in the late summer/autumn. Not more than ¼ of the weed should be submerged at the time of treatment.			
Paragrass (Brachiara mutica)	All States	9L	1.3L	200mL	Apply to actively growing plants when most have reached the early head stage.			
Phragmites, Common Reed <i>(Phragmites</i> <i>australis)</i>	All States	9L	1.3L	200mL	Apply to actively growing, fully developed plants approaching the early head stage. Visible symptoms of control may be slow to develop and may not be fully apparent until the next season. For wiper application see Wiper Equipment section.			
Rushes (Juncus spp.)	All States	-	-	-	Apply by wiper equipment to actively growing plants. Where there is a large proportion of dead foliage, pre- slashing is recommended. Allow adequate regrowth before treatment. Refer Wiper Equipment section for application instructions.			
Sedge, Tall (Carex appressa)	NSW, ACT Vic Tas Only	2L or 4L	500mL or 1L	75mL or 150mL	Apply to actively growing plants in flowering to post- flowering period (Oct-Apr). Use the lower rate only if the stand has been slashed prior to treatment. Re- treatment may be necessary. Visible symptoms may not be fully apparent for up to 3 months. Use of CDA equipment is not recommended.			
Water Couch (Paspalum distichum)	All States	9L	1.3L	200mL	Apply to actively growing plants in late summer- autumn (Feb-Mar). Do not treat after March because of the onset of winter dormancy. Full results may not be visible until the following spring. Not more than ¼ of the weed should be submerged at the time of treatment.			
Water Hyacinth	All States	6L - 9L	1L - 1.3L	150-200mL	Apply when actively growing and at or beyond the early bloom stage of growth. Use the higher rate for dense infestations.			
Water Lettuce	All States	-	1L - 1.3L	150-200mL	Best results are obtained from mid-summer through to winter. Use the higher rate on dense infestations.			
Waterlily, Yellow	All States	6L	1L	150mL	Apply when there is a maximum emergence of floating leaves. Allow 2-3 weeks for symptoms to develop, then retreat any unaffected plants. Use low volume sprayer.			

NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.

WITHHOLDING PERIOD: NOT REQUIRED WHEN USED AS DIRECTED

GENERAL INSTRUCTIONS

Kenso Agcare Ken-Up Aquatic 360 Herbicide is a non-selective, water soluble liquid herbicide effective in the control of many annual and perennial grasses and broadleaf weeds in crop areas, land preparations and non-crop areas. It is not recommended for use prior to transplanting tomato seedlings. The product is inactivated in soil and does not provide residual weed control. For residual control see tank mixtures section of this label.

Kenso Agcare Ken-Up Aquatic 360 Herbicide is absorbed by the plant foliage and green stems and moves through the plant from point of contact to root system. Visible effects are gradual yellowing, and wilting of the plant which advances to complete browning of growth above the ground and deterioration of

underground plant parts. These effects take 3 to 7 days on annual weeds, whereas on perennial weeds it may take 2 to 3 weeks or longer depending on weather conditions following spraying.

Do not disturb treated weeds by cultivation, sowing or grazing for one day after treatment of annual weeds and 7 days for perennial weeds to ensure uptake of herbicide.

No withholding period is required for this product. However to ensure herbicide absorption, grazing of treated areas should be delayed at least one day after treatment of annual weeds and 7 days for perennial weeds. Certain plants such as soursob, St Johns Wort and Bracken, may be naturally toxic to stock. Where known toxic plants are present, grazing should be delayed until complete browning of treated plants has occurred.

Do not treat weeds under poor growing or dormant conditions (such as occur in drought, waterlogging, disease, insect damage or following frosts) as reduced weed control may result. Reduced efficacy may also occur when treating weeds heavily covered with dust or silt.

Delay treatment of plants wet with dew or rain if water droplets run-off when plants are disturbed.

Resistant Weeds Warning

GROUP M HERBICIDE

Kenso Agcare Ken-Up Aquatic 360 Herbicide is a member of the glycine group of herbicides. The product has the inhibitors of EPSP synthase mode of action. For weed resistance management, the product is a Group M herbicide.

Some naturally-occurring weed biotypes resistant to the product and other Group M herbicides may exist through normal genetic variability in any weed population. The resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly. The resistant weeds will not be controlled by this product or other Group M herbicides.

Since the occurrence of resistant weeds in difficult to detect prior to use, Kenso Corporation (M) Sdn. Bhd. accepts no liability for any losses that may result from the failure of this product to control resistant weeds.

MIXING

This product mixes readily with water. The following procedure for mixing should be undertaken:

- 1. Clean spray tank, pumps, lines and nozzles and assure it is free from residues of previous spray materials.
- 2. Fill the spray tank with half the required amount of clean water and start agitation. Add the recommended herbicide/ insecticide to the spray tank, mix thoroughly and then add the required amount of Kenso Agcare Ken-Up Aquatic 360 Herbicide and mix well before adding the remaining water.
- 3. If surfactant is required, add this last to minimise foaming. The use of mechanical agitator as is not recommended as they may cause excessive foaming.
- 4. Agitate well before and during spraying .

Always use clean water when preparing the spray solution, since hard water containing calcium salts could inactivate glyphosate. Spray solutions of this product should be mixed, stored and applied only in stainless steel, aluminium, brass, copper, fibreglass, plastic or plastic lined spray tanks. Do not mix or store the product or spray solutions in galvanized steel or unlined steel (except stainless steel). Use the spray solution promptly.

TANK MIXES

Herbicides

This product may be mixed with the following products. Read and follow all label directions, restraints, plant back periods, withholding periods, safety directions etc for the tank mix product.

Chlorsulfuron (750g/kg), Metsulfuron methyl (600 g/kg), Yield¹, Stomp¹, Tillmaster CT¹, Triasulfuron (750g.kg), LVE MCPA, Goal¹ CT, Flandor¹ 500, dicamba, 2,4-D Ester, sulfometuron methyl Atrazines/Simazines

DO NOT apply atrazine tank mixes for barnyard grass control.

Kenso Agcare Ken-Up Aquatic 360 Herbicide may be tank mixed with Atrazine Flowable or Simazine Flowable for knockdown and residual weed control.

NOTE: Atrazine is **NOT** approved for use in non-agricultural situations.

Liquid Ammonium Sulphate eg Kenso Agcare Ammo-Flo Herbicide Adjuvant

RATE: 2L/100L spray solution

The addition of liquid ammonium sulphate to Kenso Agcare Ken-Up Aquatic 360 Herbicide, when used to control ANNUAL weeds, MAY improve the performance of Kenso Agcare Ken-Up Aquatic 360 Herbicide under adverse environmental conditions such as cool, cloudy weather, and assist in minimising the antagonism in tank mixes of Kenso Agcare Ken-Up Aguatic 360 Herbicide and flowable triazine herbicides. Use only liquid ammonium sulphate, NOT prilled or granulated forms. Ammonium sulphate may be corrosive to metal parts of the sprayer. Thoroughly flush tanks, pumps and nozzles with water after use.

Insecticides – this product is compatible with the following insecticides: dimethoate, Imidan¹, Le-Mat¹, chlorpyrifos, Sumithion¹ ULV and emulsifiabe concentrates of dimethoate and fenitrithion.

Pulse¹ Penetrant (or equivalent): It is recommended to add an organosilicone penetrant at the rate of 200mL/100L spray solution when treating bracken (boom application), gorse, Eucalypt suckers and lantana.

APPLICATION

Boom Equipment

Use at spray volume of 75 to 200 L/ha. When using this product at 500mL-1.5L/ha spray volumes in the range of 25-100L/ha are preferred. Fan nozzles at pressure of 240 - 280 Kpa is recommended. Boom height must be set to ensure double overlap of nozzle patterns at the top of the weed canopy.

Knapsack and Handgun Equipment

Adjust equipment to deliver a fine spray pattern and ensure a complete and uniform wetting of all foliage. For handgun equipment a D6 nozzle is recommended operating at 400-700 kPa.

Do not spray in conditions conducive to spray drift.

Wiper Equipment

Wiper Equipment (eq. ropewick, canvas, felt or carpet applicators) may be used to apply Kenso Agcare Ken-Up Aquatic 360 Herbicide on to weeds growing in oilseed crops, sugarcane, cotton, seed and pod vegetables, tree and vine crops specified in this label, pasture and non-crop areas. Avoid contact with desirable vegetation. Operate wiper equipment a minimum of 10cm above crop or pasture. Weeds should be at least 15cm above the crop or pasture at time of application. Speed of travel should be no greater than 8km/h. Best results are achieved at lower speeds and where two applications are made in opposite directions (double pass).

Where weeds are of variable height, or occur in dense infestations or clumps, some plants may not be contacted by the herbicide solution. In these cases repeat treatment may be necessary.

Mix only enough herbicide solution for immediate requirements. Do not store mixed solution for more than a few days. Flush out equipment with water after use.

RATE: Mix 1 litre of this product with 2 litres of clean water to prepare a 33% solution. This product may be used according to the above directions for suppression or control of many annual and perennial weeds. See WEEDS CONTROLLED tables for specific use recommendations.

Low volume equipment (eg gas gun or Splatter gun)

Apply as an even spray to cover all foliage

Refer to "Weeds Controlled" for the dilution and volume of mixture to be applied. The dilution is specified as "Low volume product:water". For example, a 1:9 mixture equals one part Kenso Agcare Ken-Up Aquatic 360 Herbicide plus 9 parts water.

Controlled Droplet Application Equipment (CDA)

Use the following table as a guide for achieving the correct application rates using the Micron¹ Herbi or similar equipment. See WEEDS CONTROLLED tables for specific rates and use recommendations. For hand held equipment a walking speed of approximately 1m/sec (4km/h) is recommended

recommended.				
Rate of				
Ken-Up Aquatic 360 Herbicide	3	6	9	
delivered at 1m/sec	L/ha	L/ha	L/ha	
Mixture (by volume)				
Ken-Up Aquatic 360 Herbicide:				
Water	1:3	1:1	2:1	
Micron Herbi,	Blue	Blue	Yellow	
nozzle				

Do not add oils to Kenso Agcare Ken-Up Aquatic 360 Herbicide/water mixture, otherwise difficulty in application and reduced weed control may occur.

CAUTION: CDA equipment produces a fine spray pattern which is not easily visible. Ensure spray pattern or drift does not contact foliage or any other green tissue of desirable plants, since severe injury or destruction may result.

Aerial Equipment

DO NOT use in intensive horticultural areas.

Aerial equipment may only be used to apply this product in pasture or fallow situations prior to establishment of field crops, fodder crops, or new pasture, and for pre harvest application to sorghum and cotton crops. Use at the recommended rates up to a maximum of 4L/ha. For micronair and boom equipment, apply in a minimum spray volume of 20L/ha with a swath width of 15-17m. Droplet size (average) should be 250-350 micron. Thoroughly wash aircraft particularly landing gear after spraying to remove herbicide residues.

NOTE: High temperatures and/or low relative humidity cause excessive evaporation of spray droplets which may reduce results. When temperatures exceed 25^oC, increase water volume to at least 30L/ha and increase the droplet size to at least 300 microns VMD.

DO NOT apply by air when temperatures exceed 30° C.

Application on hilly terrain: As spraying height may vary, to maximise target contact, increase water volume to 30-80L/ha and increase droplet size to at least 300 micron VMD.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT

DO NOT contaminate dams, rivers or streams with the product or used containers. When controlling weeds near water, refer to label directions to minimise the entry of spray into the water.

PROTECTION OF CROP, NATIVE AND OTHER NON-TARGET PLANTS.

Contact with desirable plants and trees may cause severe damage or destruction. Drift Warning: DO NOT use with spraying equipment or under meteorological conditions which could be expected to cause spray drift onto nearby susceptible plants, adjacent crops, crop lands or pastures. Equipment settings which produce fine droplets (150 microns or less), winds over 8kph, inversion conditions, still air and hot dry days all contribute to drift.

STORAGE AND DISPOSAL

Store in the closed, original container in a cool, well ventilated area. Do not store for prolonged periods in direct sunlight.

Triple or preferably pressure rinse containers before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point.

If not recycling, break, crush, or puncture and bury empty containers in a local authority landfill. If no landfill is available, bury the containers below 500mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. Empty containers and product should not be burnt.

For refillable containers: Empty contents fully into application equipment. Close all valves and return to point of supply for refill or storage.

SAFETY DIRECTIONS

Product will irritate the eyes and skin. Avoid contact with eyes and skin. When preparing product for use, wear elbow-length PVC gloves and face shield or goggles.

After use and before eating, drinking or smoking, wash hands, arms and face thoroughly with soap and water.

After each day's use, wash contaminated clothing, gloves and face shield or goggles.

When using controlled droplet applicator, wear protective waterproof clothing and impervious footwear.

FIRST AID

If poisoning occurs, contact a doctor or Poisons Information Centre (Phone 131126)

MATERIAL SAFETY DATA SHEET (MSDS)

Additional information is listed in the MSDS, which is available from the supplier.

Conditions of sale

Kenso Corporation (M) Sdn. Bhd. will not accept any responsibility whatsoever and howsoever arising and whether for consequential loss or otherwise in connection with the supply of these goods other than responsibility for the merchantable quality of the goods and such responsibilities mandatorily imposed by Statutes applicable to the sale or supply of these goods. To the extent allowed by such Statutes the liability of Kenso Corporation (M) Sdn. Bhd. is limited to the replacement of the goods or (at the option of Kenso

Corporation (M) Sdn. Bhd.) the refund of the price paid and where possible sufficient part of the goods to enable proper examination being returned to Kenso Corporation (M) Sdn. Bhd. within thirty days of delivery.
