

Linuron plus MCPA

See Individual components, Linuron and MCPA for label information.

Rates quoted in HerbiGuide are for a 1:2 tank mix of Linuron 500 plus MCPA amine 500. A rate of 1000 mL of the mix is equivalent to 333 g of Linuron plus 667 mL of MCPA amine 500.

This mixture is synergistic so lower rates of the mixture are just as effective as higher rates of the individual components.
