

## **Solicam plus Simazine granules**

### **Active Ingredients: 400 g/kg norflurazon + 450 g/kg simazine**

This is a tank mix made by mixing equal parts of Solicam DF with Simazine 900 granules. It provides a broader spectrum of weeds than either product alone.

Rates quoted in HerbiGuide are for a 1:1 mixture of the products. A rate of 2500 g/ha is equivalent to 1250 g of Solicam DF plus 1250 g of Simazine 900g/kg granules per hectare

See Solicam and Simazine for more detailed information on the components.
